The Book Molecular Biology Interview Questions Chapter PDF Alberts' Molecular Biology of the Cell. To that end, this text remains focused on experimental support for what we know about cell and molecular biology, and on showing students the relationship of cell structure and function. A molecular biologist studies the processes of replication, translation and transcription of genetic material on a wide scale. Loading the information needed to specify the three-dimensional shape of a protein is encoded in its amino acid sequence. E) The epsilon (E) subunit. D) The sigma (σ) subunit.
