The test involves having the patient copy a complex Objective: To evaluate the applicability, reliability and validity of the Rey-Osterrieth Complex Figure Test (CFT) in Chinese normal elderly. It is widely used to assess the visuo-constructional ability and visual memory of The Rey-Osterrieth Complex Figure (ROCF) is an instrument used to assess visual spatial perception, visual memory, perceptual organization and planning. First of all, This document contains a score sheet for evaluating a patient's performance on the Rey-Osterrieth Complex Figure Test. Administration of the copy trial requires examinees to draw a The Rey–Osterrieth complex figure (ROCF) is a neuropsychological assessment in which examinees are asked to reproduce a complicated line drawing, first by copying it The Rey-Osterrieth Complex Figure Test (ROCFT) has a long history in the field of neuropsychological assessment (Strauss, Sherman and Spreen,). This paper Complex figure test (CFT); Rey figure (RF); Rey-Osterrieth complex figure test (ROCF) Description The Rey complex figure test (RCF) comprises a copy trial of the complex figure followed by one or more recall trials. Due to its complexity, the test is particularly amenable to a process-oriented analysis that can lead to a better understanding of a client's cognitive strengths and weaknesses. Many scoring systems are used to quantify the accuracy of the drawings; these are currently implemented by hand in a subjective manner The Rey–Osterrieth Complex Figure (ROCF) test is a commonly used neuropsychological assessment tool. Administration of the copy trial requires examinees to draw a copy of the figure that is presented on the table in front of The Rey Osterrieth Complex Figure (ROCF) is a widely used neuropsychological test for visual perception and long term visual memory. Methods: A total of normal The Rey-Osterrieth complex figure test (ROCF) is a neuropsychological test extensively used in clinical practice to investigate visuospatial constructional functions, visuographic The Rey Osterrieth Complex Figure (ROCF) is a widely used neuropsychological test for visual perception and long term visual memory. It is widely used to assess the visuo-constructional ability and visual memory of neuropsychiatric disorders, including copying and recall tests The Rey–Osterrieth Complex Figure (ROCF) test is a commonly used neuropsychological assessment tool.
