Learn how weathering, erosion, and deposition break down, move, and build up the Earth's surface. The Earth's Changing Surface Interactive E-book\* explores how Earth's ever-changing surface is due to continuous natural processes such as tectonic activity, earthquakes, Earth alignment for Elevate Science. Stations included are: INFORMATION STATION Group members will read an interesting and relevant science passage then complete a task to help increase science literacy and deepen their understanding of the science concept. They will explore natural features and landforms in Australia and demonstrate how water, wind, ice, and internal earth forces shape the earth's surface. Our on-site workshops, job-embedded coaching and modeling sessions Interactive Textbook Maps as Models of the Earth SECTION Name Class Date Mapping the Earth's Surface continued CONIC PROJECTION A cone is shaped like a party hat. If you wrap the paper in a cone around one of the Earth's hemispheres, the resulting map projection is called a conic projection. This document includes A map projection is a certain way of transferring the curved surface of the Earth to a flat map. The globe is a three-dimensional model of the Earth see the surface.
