Set up a free Ahrefs master Tools (AWT) account and crawl your site with Site Audit. Lastly, monitor any regression 2/,,/)-0('*'-*0'&*-0/-.$#'-*'"%' /"%-)'1&$ '*-$%'-%'$+/-%$-/ -!//,' bf-eT^>c^h>h\>c\_Rhc[cY^X 9f-TU [c^h>h\Y^>ThSQVh\]Nc>[N[N`h c>T^cgM^R?]TLJX 6, ·

Follow the three simple steps below or watch the video walkthroughCrawl your site. There aresteps you need to follow to test and improve the server response time: Firstly, you need to collect the data and inspect why the server response time is high. Secondly, measure your server response time to identify and fix any future performance bottlenecks. (Make sure to tick the "Backlinks" option under "Crawl settings" as this is important for one of the checks in the template) Did you put the keyword in your content at leasttimes? Did you put the keyword in the url? Did you ad the keyword in the first words? Did you add it into yoast? Did you chose a focus keyword?
