The ESC guideline recommends the 0/3 or 0/0 VIDAS Troponin I Assay is an automated quantitative test for use on the VIDAS instruments for the determination of human cardiac troponin I in serum or plasma. The High-Sensitivity Troponin I (TNIH) assay is for in vitro diagnostic use in the quantitative measurement of cardiac troponin I in human serum or plasma using the VIDAS® High sensitive Troponin I assay is intended to be used as an aid in the diagnosis of myocardial infarction (MI) and for the risk stratification of patients with symptoms suggestive of acute coronary syndrome (ACS) with respect to relative risk of all-cause mortality and major adverse cardiac events (MACE) consisting of myocardial infarction, stroke, or cardiovascular death.
