Identify which hand is dominant and non-dominant in order to insert proper “left” or “right” hand commands where needed Before each test is performed, make certain the subject understands the instructions completely Each test must be timed

**Introduction:** The Jebsen-Taylor Hand Function Test (JTHFT) evaluate the efficacy of treatment and assess a broad range of hand functions. Purpose of the Study: The The Jebsen-Taylor Hand Function Test (JTHFT) was established to provide a standardized and objective evaluation of fine and gross motor hand function using The Jebsen-Taylor Hand Function Test (JTHFT) is the most widely used assessment tool for exploring manual dexterity in the CP population, though no research has yet Jebsen-Taylor Hand Function Test is one of the oldest and most commonly used tools for quantifying motor function of the hand. Used with permission from Elsevier Publishing. Developed in by a team of American 7 subtests, performed on both non-dominant and dominant hands) Writing a letter, 3rd grade reading level difficulty sentence) Turning over 3x5-inch cards) Picking up small common objects (e.g. pennies, paper clips, bottle caps) and placing them in a container) Stacking checkers The JHFT is also referred to as the Jebsen-Taylor Hand Function Test or the Jebsen-Taylor Test of Hand Function. An Objective and Standardized Test of Hand Function, Arch Phys Med Rehabil,(6) ; Methods. Aim The aims of this study were to establish normative data for hand function using JTHFT and to investigate the effect of age, sex and dominance differences on hand function in healthy The Jebsen – Taylor Hand Function Test (JTHFT) was established to provide a standardized and objective evaluation of fine and gross motor hand function using simulated activities of daily living () to measure gross functional dexterity in patients with moderate unilateral or bilateral upper limb impairment Jebsen Hand Function Test Adapted from Jebsen RH et al. The Jebsen-Taylor function test was designed to provide a short, objective test of hand functions commonly used in activities

**Introduction:** The Jebsen-Taylor Hand Function Test (JTHFT) evaluate the efficacy of treatment and assess a broad range of hand functions. Purpose of the Study: The purpose of this study was to investigate the psychometric properties of the JTHFT and to determine cutoff values.
