IPC-A is the globally preferred international acceptance standard for electronics assembly. "IPC-HDBK, "Handbook and Guide to the Requirements for Soldered Electrical and Electronic Assemblies IPC-AH is the most widely used electronics assembly acceptance standard in the electronics industry. Developed by the IPC-A Task Group (b), IPC-A Task Group – Europe (b-EU) and IPC-A Task Group – China (b-CN) of the Product Assurance Committee () of IPC IPC has released H revisions of two leading standards for the electronics assembly industry: IPC J-STDH, Requirements for Soldered Electrical and Electronic Assemblies, and IPC-AH, Acceptability of Electronic Assemblies The adoption notice of the IPC-HDBK is reprinted below to better identify the Department's intent to use ANSI/J-STD, IPC-HDBK, and IPC-A when evaluating electronic manufacturing strategies, processes, and management. The updates made to these standards are termed the H revisions of soldering standards IPC-A is the most widely used electronics assembly acceptance document. Rev Training Overview IPC-A (Rev H) Acceptability of Electronic Assemblies IPC-A Overview IPC is the most widely used specification published for the Therefore, the standards revenue is necessary to complement dues revenue. IPC-AH standard includes a general update to the document, introduces several new surface mount component types and removes target conditions IPC-J-STD and IPC-A define the acceptance criteria for electrical connectivity and materials used. Updated with participants fromcountries providing input and expertise, this document brings the latest criteria along with many new and revised graphics to the industry IPC-AH Acceptability of Electronic Assemblies Developed by the IPC-A Task Group (b), IPC-A Task Group – Europe (b-EU) and IPC-A Task Group – China (b-CN) of the Product Assurance Committee () of IPC Users of this publication are encouraged to participate in the development of future revisions. The price schedule offers a% discount to IPC members.
