Evidence-based and founded upon a solid theoretical framework, the OASES protocol supports clinical and research decision-making. The OASES-A protocol is useful in the assessment and treatment of stutterers, as it provides specialized speech-language pathologists with stutterers' self-perception regarding their communication difficulties and the impact of stuttering on their quality of life. The OASES stuttering test is an evidence-based, self-report measure. This easy-to-use instrument measures the impact of stuttering with this quick, easy-to-use, comprehensive tool. The Overall Assessment of the Speaker's Experience of Stuttering (OASES) seeks to accomplish this goal by focusing on the speaker's experience of stuttering, as defined, in part, by the WHO's ICF framework. This paper presents a shortened research version of the OASES-A response form (OASES-A-R) that can be used by researchers in scientific studies involving adults who stutter that reflect the Section and Total Scores of the original OASES-A using fewer items. The Overall Assessment of the Speaker's Experience of Stuttering (OASES) seeks to accomplish this goal by focusing on the speaker's experience of stuttering, as defined, in part, by the WHO's ICF framework.
