Its goals arefold: extend category options; characterize how the new scale The Cognitive Performance Scale (CPS) in the widely used interRAI suite of instruments is of interest to clinicians and policy makers as a potential screening mechanism for We created a hierarchical, four-level Cognitive Function Scale, a priori, using either the BIMS or CPS score, depending on which method of assessment was completed. ision Making: Not Independent (1, 2, 3) Understood: Not Independent (1, 2, 3, 4) Short-Term Memory: Not OK (1) Source: Morris JN, Fries BE, Mehr DR, Hawes C, Philips C, Mor V, Lipsitz LMDS Cognitive Performance Scale. Cognitive Performance Scale (CPS). Its goals arefold: extend category options; characterize how the new scale variant tracks with the Mini This study presents the first update of the Cognitive Performance Scale (CPS) inyears. Its goals arefold: extend category options; characterize how the new scale variant tracks with the Mini-Mental State Examination; and present a series of associative findings However, there has been little evaluation of the CPS in home care settings This study presents the first update of the Cognitive Performance Scale (CPS) inyears. Its goals arefold: extend category options; This study presents the first update of the Cognitive Performance Scale (CPS) inyears. The residents with differing levels of cognitive performance or impairment using the. Journal of Gerontology: Medical Sciences(4)Cognitive Performance Scale. Journal of Gerontology: Medical Sciences(4): M–M The RUG-III Classification system uses the CPS scale to identify residents who demonstrate moderate to severe cognitive impairment as a basis for classification in the Impaired Cognition RUG-III groups The Cognitive Performance Scale (CPS) in the widely used interRAI suite of instruments is of interest to clinicians and policy makers as a potential screening mechanism for detecting dementia. View full text Download PDF. This study presents the first update of the Cognitive Performance Scale (CPS) inyears. The CPS is summative scale that is part of the Aims: The Cognitive Performance Scale (CPS), a minimum data set instrument of the interRAI, was initially designed to evaluate cognition in residential care and has dem Typical levels of care required to ensure safety in common everyday activities at each level/mode of performance on the Allen Cognitive Scale are described in the following Source: Morris JN, Fries BE, Mehr DR, Hawes C, Philips C, Mor V, Lipsitz LMDS Cognitive Performance Scale.
