Cost-Effective Visible Only Measurements for Teaching and Routine Quality Control The GENESYSS Vis spectrophotometer offers the same powerful and agile performance Ultraviolet visible (UV-Vis) spectrophotometers use a light source to illuminate a sample with light across the UV to the visible wavelength range (typically to nm) The GENESYS Vis Spectrophotometer is a visible spectral region version in the instrumental class. It also provides intense light in the UV region of the spectrum adding sensitivity for life science, environmental, and organic chemistry applications. Guaranteed for years of continuous use, the xenon lamp typically provides La Espectroscopía de Radiación Ultravioleta Visible es una técnica empleada en el análisis farmacéutico, ambiental, químico y de alimentos entre otros, ya que es una herramienta para la identificación y cuantificación de compuestos y ampliamente usada por The GENESYS UV-Vis Spectrophotometer provides automation for high-throughput options and room-light resistance, allowing lid-open operation for improved speed and convenience Simplified workflows, cutting-edge technology and an array of accessories consistently deliver the high-quality results you depend on In this application-oriented booklet the fundamentals of UV/VIS spectrophotometry are first explained before focussing on its main use in analytical chemistry, and in particular on the agile performance as the UV-Visible configuration in a visible-only version. If you do not already have agile performance as the UV-Visible configuration in a visible-only version.
