Designation of quantity and size of defects, and of intensity of uniform changes in appearance — Part Assessment of degree of blistering Part of degree of rusting

1 Scope This part of ISO describes a method for assessing the degree of rusting of coatings by comparison with pictorial standards. ISO defines the system used for designating the quantity and size of defects and the intensity of changes in appearance of coatings and outlines the general principles of the system. The work of preparing International Standards is normally carried out through ISO technical committees.

Evaluation of degradation of coatings. Each member body interested in a subject for which a technical ISO consists of the following parts, under the general title Paints and varnishes — Evaluation of degradation of coatings — Designation of quantity and size of defects, and of intensity of uniform changes in appearance: Part General introduction and designation system. The pictorial standards provided in this part of ISO INTERNATIONAL STANDARD. This system is intended to be used, in particular, for defects caused by ageing and weathering, and for uniform changes such as colour changes, for example ISO specifies a method for assessing the degree of rusting of coatings by comparison with pictorial standards. This [BS EN ISO 15002] Paints and varnishes. ISO (E) Paints and varnishes — Evaluation of degradation of coatings — Designation of quantity and size of defects, and of intensity of uniform changes in appearance —. The pictorial standards provided in this part of ISO show coated steel surfaces which have deteriorated to different degrees by a combination of rust broken through the coating and visible under-rust

NOTE The rust formation on uncoated steel surfaces is designated in accordance with ISO (rust grades A, B, C, and D). ISO defines the system used for designating the quantity and size of defects and the intensity of changes in appearance of coatings and outlines the general principles of the system ISO Free download as PDF File.pdf, Text File.txt) or read online for free NOTE The rust formation on uncoated steel surfaces is designated in accordance with ISO -1 (rust grades A, B, C, and D). ISO -1 defines the system used for designating the quantity and size of defects and the intensity of changes in appearance of coatings and outlines the general principles of the system ISO (E) Foreword ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). Paints and varnishes — Evaluation of degradation of coatings — Designation of quantity and size of defects, and of intensity of uniform changes in appearance ISO describes a method for assessing the degree of rusting of coatings by comparison with pictorial standards.
