A parallel version of the test, the SPM The standard progressive matrices (SPM) are assessment measures more generally known as the Raven's progressive matrices (RPM). Specifically, this name refers to the original version of the Raven's test developed in 1916. When alternate versions of the RPM were created (i.e., colored progressive matrices and advanced progressive matrices) it is the strength of people's desire to make sense of such "booming, buzzing, confusion" (and their ability to do so) that Raven's Progressive Matrices (RPM) tests set out to measure. Coloured Progressive Matrices, Standard Progressive Matrices Plus and the Crichton and Mill Hill vocabulary scales, authored by Raven, J., Rust, J. and Squire, A., were published by NCS. The Standard Progressive Matrices (RSPM) is the first of three instruments known as the Raven's Progressive Matrices, the other two being the Raven Coloured Progressive Matrices (RCPM) and the Raven Advanced Progressive Matrices (RAPM). The RSPM is designed to measure a person's ability to form perceptual relations and to reason by analogy independent of language and formal schooling. Raven's Progressive Matrices (often referred to simply as Raven's Matrices) or RPM is a non-verbal test typically used to measure general human intelligence and abstract reasoning and is regarded as a non-verbal estimate of fluid intelligence.
