Solutions that seal, damp and protect Trelleborg Engineered Coated Fabrics. Trelleborg's Engineered Coated Fabrics business unit, a world-leading producer of specialty polymer-coated and calendared materials, operates the Kantseal as a good alternative to the O-Ring as an axial static seal in applications requiring higher gap extrusion resistance and minimal deformation of the cross-section. Trelleborg Sealing Solutions fulfills challenging service requirements, supplying standard parts in volume or a single custom-manufactured component, through our integrated We would like to show you a description here but the site won't allow us. The Kantseal is a good alternative to the O — Ring as an axial static seal in cases where particular demands are made. Now, with detailed information available on materials and standard sizes, Kantseal has been given its own. Kantseals are square or rectangular sectioned elastomer rings, typically used in static locations or lower pressure dynamic positions, where high sealing efficiency and shape stability are required. They can be compression molded or machined and additional corner chamfers or radii can be used to alter the seal's profile.
