This paper outlines the development and validation of the Work-Family Conflict Scale (WAFCS) designed to measure work-to-family conflict (WFC) and family-to-work conflict (FWC) for validity (i.e., the behavioral role conflict scale is distinct from a perceptual assessment of work-family conflict) and 2) criterion-related validity (i.e., the behavioral role conflict is The four item scale measures work-family conflict as a two-directional process – work interference with family and family interference with work. The work-family conflict scale (WAFCS): Development and initial validation of a self-report measure of work-. Researchers report on a sample study that developed and validated short, self-report scales of work-family conflict (WFC) and nders, M. R., & Fletcher, R. (). amily conflict for use with parents. Within this vast literature, work-family conflict is the most commonly studied construct. Advocated procedures were used to develop the scales and test dimensionality and internal This paper outlines the development and validation of the Work-Family Conflict Scale (WAFCS) designed to measure work-to-family conflict (WFC) and family-to-work conflict (FWC) for use with parents of young children. The items have been used We conceptualize work-family behavioral role conflict as a distinct concept from behavior-based conflict as conceptual-ized by Greenhaus and Beutell () and measured by This paper outlines the development and validation of the Work-Family Conflict Scale (WAFCS) designed to measure work-to-family conflict (WFC) and family-to-work conflict family interface and the challenges faced by working adults and their families. Child Psychiatry and Human Development,(3), conflict as an outcome [8, 9], however no well-validated measures of work-family conflict for clinical use with parents exist. An expert informant and consumer feedback approach was utilised to develop and refi The WAFCS is a promising brief measure for the assessment of work-family conflict in parents and both subscales have good internal consistency, construct validity as well as concurrent and predictive validity. Using conceptualizations consistent with the current literature, the researchers offer content domains and definitions of the constructs. This paper outlines the development and validation of a specific measure of work-family conflict for use with parents. The Work-Family Conflict Scale (WAFCS) [23] is a short item measure assessing WFC (five items) and FWC (five items) Researchers report on a sample study that developed and validated short, self-report scales of work-family conflict (WFC) and family-work conflict (FWC). There is a The Work-Family Conflict (WFC) Scale (Dolcos & Daley,) was designed to assess interrole conflict in which the role pressures from the work and family domains are Missing: pdf The work-family conflict scale (WAFCS): Development and initial validation of a self-report measure of work-family conflict for use with parents. Using Robert McMurrian Louisiana State University. Child Psychiatry and Human Researchers report on a sample study that developed and validated short, self-report scales of work-family conflict (WFC) and family-work conflict (FWC). A number of measures of work-family conflict exist that have high reliability and are The Work and Family Conflict Scale (WAFCS) is designed to measure the impact of work and family role conflicts on individuals' well-being, job satisfaction, and overall work-life balance. The The first sample was used to conduct exploratory factor analysis (EFA) and the second to conduct the CFA. Measures Demographics were assessed using the Family Background Questionnaire [25].
