Learn about the scope, definitions, materials, design, execution and inspection of concrete structures. The aim of this project is to try and illustrate the methods used for flat slab design using ACI, NZ-, and EUROCODE2 and IS design codes. The significant change is a study of the new IS code of practice for plain and reinforced concrete structures, with comparison with the previous version IS 456:2000. The code covers IS 456:2000 (Amendment Plain and Reinforced Concrete Code of Practice Civil 4M Free download as PDF File.pdf), Text File.txt) or read online for free. IS 456:2000 Free download as PDF File.pdf) or read online for free. For carrying out this project an interior panel of a flat slab with dimensions x m and super imposed load/ KN/m was designed using the codes given above. A study of the new IS code of practice for plain and reinforced concrete structures, with comparison with the previous version IS 456:2000. The code covers durability, fire resistance, design and detailing requirements for different exposure conditions and concrete grades.
