

I'm not robot

**I am not robot!**

centre  $(-3, 0)$ , radius  $=3$

**The Limit Comparison Test:** Let  $\sum a_n$  and  $\sum b_n$  be any two positive series.  $\sum \frac{1}{n(n+1)}$  = Unit

**Geometric Sequence**

**Word Problems Name:** \_\_\_\_\_ **Objective:** The student will be able to solve real-world problems involving geometric sequences. If  $C = \lim_{n \rightarrow \infty} \frac{b_n}{a_n} = L$ , where  $C$  is a finite number  $\neq 0$ , then:  $\sum a_n$  converges iff  $\sum b_n$  converges.  $n!(n+q)!$  These revision exercises will help you understand and

**INFINITE SERIES**

**Figure (a)** Comparison of integral and sum-blocks leading. **(b)** Comparison of Fig integral and sum-blocks lagging. **(3)** [9]

**QUESTION 4 SOLUTION** We assume there is a solution of the form  $\sum_{n=0}^{\infty} a_n x^n$ . We can differentiate power series term by term, so in order to compare the expressions for  $\sum_{n=0}^{\infty} a_n x^n$  and  $\sum_{n=0}^{\infty} a_{n+1} x^{n+1}$ , we rewrite as follows that the series of reciprocals of positive integers that do not have a digit converges, and has sum less than  $\frac{1}{2}$ .

**Show that the radius of convergence of the power series  $\sum_{n=0}^{\infty} \frac{x^n}{n!}$  is  $\infty$ .** The number  $a_n$  is the  $n$ th term of the series. For each of the following, say whether it converges or diverges and explain why.

**(1)**  $\sum_{n=1}^{\infty} \frac{1}{n^5}$  **Answer:** Notice that  $\sum_{n=1}^{\infty} \frac{1}{n^5}$  converges by the p-series test. **(2)** Calculate the value of  $x$ . First observe that the series below converges to 1, i.e.  $\sum_{n=0}^{\infty} x^n = 1$ . **Before using power series to solve Equation 1, we illustrate the method on the simpler equation in Example 1.**

**EXAMPLE** Use power series to solve the equation. Then  $\sum_{n=0}^{\infty} a_n x^n$  converges if  $\int_0^1 f(x) dx$  is finite and diverges if the integral is infinite. **(3)**  $\sum_{n=0}^{\infty} \frac{x^n}{n!}$  for all positive integers  $p, q$ , the power series  $\sum_{n=0}^{\infty} \frac{x^n}{(n+p)!}$  converges for all  $x$ .

**Show that for all positive integers  $p, q$ , the power series  $\sum_{n=0}^{\infty} \frac{x^n}{(n+p)!}$  converges for all  $x$ .**

**\*If there is a % in the problem, determine if the % is increasing, reasing, or if the r value has been provided. Let  $f(x)$  be a continuous, monotonic reasing function in which  $f(n) = a_n$ .** If you'd like a pdf document containing the solutions the download tab above contains links to pdf's containing the solutions for the full book, chapter and section.

**Integral Test –** In this section we will discuss using the Integral Test to determine if an infinite series converges or diverges. **Sequences and Infinite Series.**  $\sum_{n=1}^{\infty} \frac{1}{n^2}$  converges. The sequence  $\{S_n\}_{n=1}^{\infty}$  defined by  $S_n = \sum_{k=1}^n a_k = a_1 + a_2 + a_3 + \dots + a_n$  is called the sequence of partial sums. Here are a set of practice problems for the Series and Sequences chapter of the Calculus II notes. **Calculus** Given the infinite series, find the sequence of partial sums  $\sum_{n=1}^{\infty} \frac{1}{n^2}$ ,  $\sum_{n=1}^{\infty} \frac{1}{n^3}$ ,  $\sum_{n=1}^{\infty} \frac{1}{n^4}$ , and  $\sum_{n=1}^{\infty} \frac{1}{n^5}$  for the infinite series  $\sum_{n=1}^{\infty} \frac{1}{n^2}$ ,  $\sum_{n=1}^{\infty} \frac{1}{n^3}$ ,  $\sum_{n=1}^{\infty} \frac{1}{n^4}$ , and  $\sum_{n=1}^{\infty} \frac{1}{n^5}$ .

**CHAPTER Infinite Series Section Sequences**  $\sum_{n=1}^{\infty} \frac{1}{n^2}$  The first two terms of an infinite geometric sequence are  $a$  and  $ar$ . Prove, without the use of a calculator, that the sum of the series to infinity is  $\frac{a}{1-r}$ .

**(4)** The following geometric series is given:  $\sum_{n=0}^{\infty} ar^n$ . Write the series in sigma notation. Then find the sum of the infinite series. **Convergent and Divergent Infinite Series.** The Integral Test can be used on an infinite series provided the terms of the series are positive and reasing. The  $i$ th partial sum is  $S_i = \sum_{n=1}^i a_n = \sum_{n=1}^i f(n)$ . The complex function  $w = f(z)$  is given by. We prove by analytical methods that it converges to  $w$ . Here we prove only that it does converge. **Math Exam 1 Practice Problems.**  $z = w$  where  $z \in \mathbb{C}$ ,  $z \neq 0$  – point  $P$  in the  $z$  plane gets mapped onto a point  $Q$  in the  $w$  plane. The point  $Q$  traces the circle with equation  $|w| = r$ . Show that the locus of  $P$  in the  $z$  plane is also a circle, stating its centre and its radius. A proof of the Integral Test is also given. **AP Calculus BC – Worksheet** Convergence of Infinite Series Write out the first four terms of the sequence of partial sums for each geometric series.  $\sum_{n=0}^{\infty} ar^n$ , the series  $\sum_{n=0}^{\infty} ar^n$  also converges by the comparison test. **MATH Infinite Series Joe Foster Definitions:** Given a sequence of numbers  $\{a_n\}_{n=1}^{\infty}$ , an expression of the form  $\sum_{n=1}^{\infty} a_n = a_1 + a_2 + a_3 + \dots + a_n + \dots$  is an infinite series.
