

I'm not robot

I am not robot!

Cory keeps the simple steps of programming at the beginning of the book and leads you through the tougher concepts of object oriented programming towards the end of the book Start to program in Python and build your first program Learn Object-oriented programming and create a powerful Python program to get you hooked Learn to use tools like Git, Bash, and regular expressions. After this section, you'll be hooked on programming Then use your new coding skills to build a scraper Study Computer Science fundamentals like data structures and algorithms I cover the different programming paradigms—focussing on object-oriented programming—and build a game that will show you the power of programming. You learn quickly with lots of example programs and challenges. This book is concise and to the point learning.
