

I'm not robot

**I am not robot!**

BS PartStandard In the design of shallow foundation or traffic surface, design engineers need to know the bearing capacity of soil underneath. Plate bearing test is carried out in the field to serve this purpose NOTE Amendmentto this standard removes text superseded by BS EN ISO and BS EN ISO, and makes reference to the relevant standard for each affected subclause. Results from the test can be used as design parameter or used to confirm the design assumption BRITISH STANDARD BSIncorporatingSoils for civil engineering purposes PartIn-situ tests ICS BSISBN BS is maintained by B/This standard is available from the following sources: BSI Knowledge \_ e download as PDF File.pdf), Text File.txt) or read online for freePlate bearing tests are carried out in the field to determine the bearing capacity of soil for designing shallow foundations and traffic surfacesThe test involves loading a circular plate using a hydraulic jack and This Part of BS describes in-situ methods of test on soils for civil engineering purposes, i.e. BS PartStandard In the design of shallow foundation or traffic surface, design engineers need to know the bearing capacity of soil underneath. BS which has now been withdrawn is replaced by the following Parts of BS PartGeneral requirements and sample preparation; — Part 2 BS PartStandard In the design of shallow foundation or traffic surface, design engineers need to know the bearing capacity of soil underneath. tests made directly on the soil in place as distinct from laboratory tests, described in Partsof this standard, for which samples first need to be taken. This document describes methods for conducting in-situ soil tests, including: (1) Five methods for determining in-situ soil density, including small and large pouring cylinder methods for fine-medium and fine-coarse grained soils The methods described in this Part of this standard have been arranged in groups BSpart InSitu e download as PDF File.pdf), Text File.txt) or read online for free.
