You will be redirected to the full text document in the repository in a few seconds, if not [click here](#) The Quick Test for PTSD (Q-PTSD; Morel,) was developed as a time-efficient method of detecting response bias in individuals being assessed for combat-related PTSD. This instrument consists of statements derived from clinical experience and a review of literature on the sequelae of PTSD. They include behavioural statements that do not reflect any We are not allowed to display external PDFs yet.
