The viewfinder serves as a compact television screen affixed to the camera, enabling a real-time display of the camera's perspective. Camera lenses generally come with either a C-mount or CS-mount and they must match approximately to the camera's mounting requirements. The difference between the two is the distance of the lens option from the camera's imager.

VIDEO TRANSMISSION METHODS:

The main purpose of the transmission medium is to carry the video signal cameras and the use of interchangeable lens systems. The imaging device (a CCD chip) is the main conversion element. The CCD generates a powerful visual stream with a large amount of light. The multiple lens possibility has therefore been the cornerstone in the pursuit of extreme imaging performance.
